

FACTORY ASSEMBLED TERMINAL BLOCKS

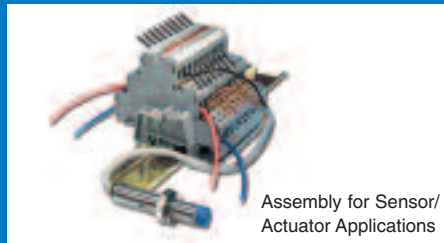

Assembly for Controls in Lift

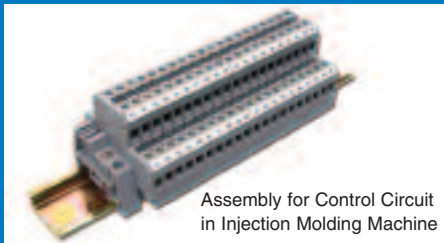

Assembly for Drive in Injection Molding Machine

Assembly for Control Wiring

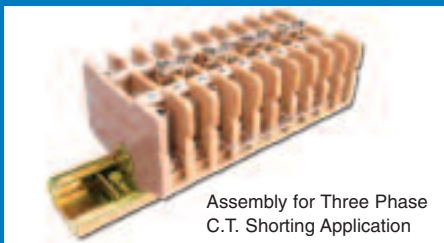

Assembly for Sensor/Actuator Applications

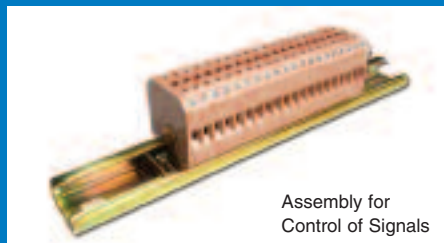

Assembly for Control Circuit in Injection Molding Machine

Assembly for Three Phase C.T. Shorting Application

Assembly for Three Phase C.T. Shorting Application

Assembly for Control of Signals

Ready-to-use and application-specific terminal block assemblies complete with interconnecting and marking (completed, or accessories for customer application) can be supplied as per customer drawing/specification. This eliminates in-house assembly costs, reduces inventory, and reduces the possibility of wiring problems. Amphenol Pcd looks forward to the opportunity to work with you on your specific assembly requirements.

Gray is the standard color for Polyamide blocks. Khaki is the standard color for any Series supplied in high grade Melamine. See adjacent note on alternate color variations.

AVAILABLE COLORS

The choice of red, yellow, blue, black, green, orange, white, beige and brown color terminal blocks is available upon request. Check catalog for specific colors available for each block variation.
