

Amphenol Pcd Introduces Cable Strain Relief for 5.0MM and .200" Pluggable Terminal Blocks

(Peabody, MA) Wire strain relief provisions on new lines of 5.0mm and .200" spacing European style terminal blocks available from Amphenol Pcd provide users with additional installation control and security for critical applications where the wire bundle may be stressed. Standard cable ties are utilized to secure wire bundles to an integral mounting tab which extends from the plug body.

Popular 5.0MM and .200" spacing ELFP style right angle pluggable blocks are available with the strain relief feature in 3 through 7 positions. Strain relief plugs are may be ordered with or without locking ears, in alternate black or green colors, with tin or gold plate, and with all PCD keying and marking options. Plugs are rated at 15A/300V.

Delivery is 10 days or less for production quantities in accordance with the PCD Express delivery program.
