11th September 2020

Dear Customer,

PRODUCT CHANGE NOTIFICATION – TERRAPIN MANUFACTURING CHANGE

Amphenol Limited would like to notify its customers to an approaching change in manufacturing site of its proprietary Terrapin SCE2 miniature connectors, and assure its customers that there will be no change to the design, quality or performance of this superior EMC, IP68 rugged connector.

Terrapin is an established product series which has been used for many years in major projects across the globe on equipment such as radios, headsets, switches, routers and ruggedised laptops, as well as over-moulded cable designs for media communication and server applications.

The manufacturing site change will be managed in phases subject to the Quality Plan. The first phase will transfer metalwork manufacture and plating subject to receiving complete ISIR documentation for review. Following phases will transfer insert manufacture and assembly subject to receiving complete internal FAIR IAW AS9102.

Since its introduction in 2010, the product range has now matured and as part of our standard business model we are now carrying out the necessary work to move production to our sister location. This ongoing process releases capacity at our Whitstable facility to concentrate on new innovative designs and development opportunities.

Further product information such as the Terrapin Catalogue and Data Sheets are available through our website at www.amphenol.co.uk or contact your Customer Service Representative either direct, via email at info@amphenol.co.uk or telephone +44 (0)1227 77 3200.

This notice does not affect PEI Genesis (assembling Distributor) and our other partners in the distribution channel, so parts for prototyping and urgent requirements can still be sourced as needed off the shelf.

Yours sincerely,

John McGee – Product Manager
